# SPINNING BLANKS

## 1. BLAAS M

Taper: **Moderate**  
Action: **Moderate/Fast**  
Material: **Carbon 44 msi**  
Joint: **put over**  
Series: **SLM-N**

Sections: **2**

A combination of a smooth, half-full deflection with a restrainedly great speed. In this series we managed to join together these parameters with a great stability. The blanks from this series are characterized by a delicate and precise tip part, and a smoothly operating middle section. They perfectly prove correct in the hardest conditions during fish haul, guaranteeing a full safety.

Construction: **PAFB**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EURO)

## 2. BLAAS F

Taper: **Moderate/Fast**

Action: **Fast**

Material: **Carbon 50 msi**

Joint: **put over**

Series: **SLF-N**

The blanks are similar to the Blaas M series, but characterized by a more significant greater speed and a more peak deflection. The precise tip part goes smoothly into the butt cap, which generates slightly more power than the M series. The perfect casting parameters, a great stability and confident behavior during the fight with the fish.

Construction: **PAFB**

### 3. BLAAS XF

Taper: **Fast**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **SLXF-N**

Construction advanced blanks created from different graphite mats. The sensitive tip part, smoothly working middle section and a relatively strong butt cap. This series of fast blanks with a peak deflection, a very great stability and progressive work under burden. Great casting parameters and work under burden.

Construction: **PAFB, MMT, SCT**

## 4. BLAAS SLIM

Taper: **Medium**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **SLS-N**

Sections: **2**

Construction advanced blanks created from different graphite mats. This is a series of fast blanks with small diameters and small convergence but at the same time with the peak deflection, the sensitive tip part and great progressive work. These blanks excellently prove correct in the hardest conditions during fish haul. Relatively thick wall protects against injuries. The perfect casting parameters.

Construction: **PAFB, MMT, SCT**

## 5. HERS

Taper: **XFast**

Action: **XXFast**

Material: **LR Carbon 66 msi Blend**

Joint: **put over**

Series: **SLR-N**

Sections: **2**

Made from resources of the highest quality, construction advanced, created from different graphite mats. Unbelievably sensitive tip part smoothly goes into the butt cap, generating a great reserve of power. Amazing stability, perfect casting parameters and a great sensitivity. This series are very fast blanks with a peak deflection, but a rather yielding butt cap.

Construction: **PAFB, MMT, SCT**

## 6. KRAAG F

Taper: **Fast**

Action: **Fast**

Material: **LR Carbon 50 msi Blend**

Join: **put over**

Series: **SKF-N**

This blank is similar to Kraag XF but it has less speed and a little less tip part bending. More progressive work, butt part with slightly less power.

Construction: **PAFB, MMT, SCT**

## 7. KRAAG XF

Taper: **Fast**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Join: **put over**

Series: **SKXF-N**

This is ultra fast blanks series with typically tip bending and relatively great convergence. Soft, delicate tip part goes smoothly into middle part and strong butt part of the blank. This blank is made in nanotechnology (nanoresin and nanofibers), without glass scrim. Such construction gives us maximum sensitiveness, good control over baits work and safety tow fish. Owing to nanotechnology we could reach greater resistance to mechanical damages and better blanks balance.

Construction: **PAFB, MMT, SCT**

## 8. KRAAG Elite

Taper: **Fast**

Action: **XXFast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **SKXE-N**

Sections: **1**

This is ultra fast, 1 piece blank series with highly tip bending and great convergence. Soft, delicate tip part goes smoothly into middle part and then into relatively strong butt part of the blank, which works progressively under load.

Using the newest generation nanomaterials (nanoresin and nanofibers) allows to achieve unusual resistance to mechanical damages, maximum sensitiveness, control over the bait's work, safe fish towing and better blank balance.

Excellent cast parameters, great stability and safe behaviour during fighting with fish.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EURO)

## 9. NOCTISS

Taper: **XFast**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Joint: **spigot**

Series: **SNT-N**

A state-of-the-art ultralight construction with a great balance resulting in very sensitive blank. Extremely thin and precise tip works smoothly enabling progressive move under load. The bottom part of these blanks is strengthened with a structural woven layer Carbon-Titanium Wrap.

Construction: **PAFB, MMT, SCT**

## 10. VEGTER BORON

Taper: **Fast**

Action: **XFast**

Material: **Boron + LR Carbon 58 msi Blend**

Joint: **spigot**

Series: **SS-N**

These are our most advanced technologically constructions. A combination of graphite fibers with boron fibers placed on the whole length of the blank let us to create unique blanks of an unusual sensitivity. Great casting possibilities, a great speed of reaction to different burdens and a fluency of work under burden cause, that the fish is hauled faster, more effectively and safer. A precise and "cut" tip part, stable middle section and a reactive butt cap - these are the features of the blanks.

Construction: **BLRC, PAFB, MMT, SCT**

## 11. THORUS BORON

Taper: **XFast**

Action: **XFast**

Material: **Boron + LR Carbon 58 msi Blend**

Joint: **spigot**

Series: **SBO-N**

A brand new boron blank generation - lighter, ever more sensitive, with an amazing balance! Manufactured with cutting-edge technological structures. A combination of graphite nanofibers with boron fibers placed on the whole length of the blank led to an unusual series with improved rod sensitivity. A thin and precise tip part enabled fluent and progressive work under burden. Excellent casting ability, high responsiveness to varying load and unique flexibility cause fish hauling faster, more effectively and safer.

**Construction: BLRC, PAFB, MMT, SCT**

## 12. ULTRALIGHT SLIM F

Taper: **Moderate**

Action: **Fast**

Material: **Carbon 50 msi**

Joint: **put over**

Series: **ULF-N**

A new series of fast blanks, Ultra Light type, with small convergences and diameters. Relatively large wall thickness. Used the latest generation nanomaterials (nanofibers and nanoresin) allowed to get above-average resistance to mechanical damages what is extremely important with this type of blanks. The precise tip part goes smoothly into the butt cap, which generates quite a lot of power but it gives a very smooth and progressive deflection. The perfect casting parameters, a great stability and confident behavior during the fight with the fish. Dedicated to the work with small and lightweight bait.

Construction: **PAFB, MMT, SCT**

## 14. TROUT AREA

Taper: **Moderate**  
Action: **Moderate**  
Material: **LR Carbon 44 msi Blend**  
Joint: **put over**  
Series: **TA-N**  
Sections: **2**

Trout Area is a series of modern, two-piece blanks, designed specially for delicate fishing with ultra-light lures. They can boast of low convergence and exceptional stability at such low powers. Outstanding casting parameters, exceptional hooking efficiency and excellent behavior during hauling of even the smallest fish.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EUR)
TA562-2N	5'6"	1-2lb	0,3-2g	0,94	6,4	231,00

## 15. LEXI

Taper: **Moderate**  
Action: **XFast**  
Material: **Nanoflex/Carbon 50 msi**  
Joint: **put over**  
Series: **SX-N**  
Sections: **2 or 3**

A new blank series of the newest generation fiberglass obtained in nanotechnology processes.

Nanotechnology allows us to modify and improve materials at the level of particular atoms and molecules. The composite obtained in this way has high modulus of elasticity and disproportionately high strength modulus what gives very high resistance to stretching and bending strength.

These blanks are slim, sensitive, durable and well balanced. Allow safe towing. Nanoflex rod throws are accurate recurrent and effortless.

Power Joint creates smooth power transition between tip and butt part. The smooth perfect bending progression allows high-speed competitive towing without fish losing.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EUR)
SX685-2N	6'8"	1-5lb	1-5g	1,2	7,9	208,00

SX7313-3N	7'3"	5-13lb	4-22g	1,35	11,6	287,00

## 16. APIS TRAVEL

Taper: **Fast**  
Action: **Fast**  
Material: **LR Carbon 58 msi Blend**  
Joint: **put over**  
Series: **SAT-N**

Blanks from this series are distinguished by their speed accompanied with a progressive deflection and a fast convergence. Just a small load makes the soft and delicate tip part work. Then it goes smoothly into the middle part and finally into the relatively strong bottom part. The usage of the most advanced nanomaterials (nanofibers and nanoresin) made it possible to obtain resistance to mechanical damages, maximal sensitiveness, control over the bait's work, safe fish towing and better blank balance. What makes these blanks unique, is the perfect casting parameters, a great stability and a confident behavior during the fight with the fish. The outer layer of woven increases aesthetic values and impact resistance.

Construction: **PAFB, MMT, SCT**

## 17. VERTICAL

Taper: **Fast**  
Action: **XFast**  
Material: **LR Carbon 58 msi Blend**  
Series: **VE-N**  
Section: **1**

Vertical blanks are leaders among one-piece rods with extreme tip bending. The bottom part is significantly stronger than the middle part and the soft tip, however, it still works progressively under load. We used the latest generation nano-fibers and nano-resin, which enabled both high sensitivity and extraordinary resistance to mechanical damage. These blanks are dedicated to vertical angling: they give full control over a bait. They also bring safety and trustworthy behavior while fighting with a fish.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EUR)

## 18. PIKE ISILO

Taper: **XFast**

Action: **Moderate/Fast**

Material: **LR Carbon 58/44 msi Blend**

Series: **PI-N**

Sections: **1**

Structurally advanced blanks made of various graphite mats. Relatively strong tip, smooth middle section and fast power increase in the bottom part. Pike Isilo blanks are quite fast, but their main feature is a very progressive deflection and high power generated by lower section, which allows for comfortable casting of baits with a wide mass span. Mainly intended for pike fishing with large lures. Great casting performance and excellent work under load.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EUR)
PI7028-1N	7'0"	17-28lb	28-90g	2,0	15,3	223,00

## 20. CATFISH

Taper: **Fast**  
Action: **Moderate**  
Material: **LR Carbon 50 msi Blend**  
Joint: **put over**  
Series: **SCT-N**  
Sections: **1**

Exceptionally strong blanks used for catfish fishing rods building. Used nanomaterials allowed to get relatively light and delicate construction with enough strength to force to surrender during intensive haul even the largest specimens. Relatively subtle tip part goes smoothly into the butt cap which generates a lot of power. At the same time tip part readily goes into deflection under burden and gives large control over the hauled fish. The perfect casting parameters.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EURO)
SCT6330-1N	6'3"	17-30lb	25-120g	2,1	10,6	233,00

## 2. VENTUS R

Taper: **Fast**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **FR-N**

Sections: **4**

Construction advanced blanks created from different graphite mats. The series of these blanks has a strengthened middle section and a relatively strong butt cap. It corrects the loading of the blank during casting, raises the speed and gives a typically peak deflection. These are very fast, stable but also progressive blanks, which prove correct perfectly during fishing at big or average distances.

Construction: **PAFB, MMT, SCT**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FR761-4N	7'6"	#1	1,4	6,3	304,00

### 3. VESPER

Taper: **Moderate/Fast**

Action: **Fast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **FL-N**

Sections: **4**

Cutting edge construction solution specially designed for nymph fishing. Faultlessly sensitive tip works progressively under load and keeps perfect balance. These features combined with a high speed of a rod makes the product especially relevant for the mentioned method.

Construction: **PAFB, MMT, SCT**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FL961-4N	9'6"	#1	1,2	8,4	332,00
FL1001-4N	10'0"	#1	1,2	8,5	337,00
FL962-4N	9'6"	#2	1,2	8,9	332,00
FL1002-4N	10'0"	#2	1,2	9,0	337,00
FL1062-4N	10'6"	#2	1,2	10,1	339,00
FL1102-4N	11'0"	#2	1,2	10,2	344,00
FL963-4N	9'6"	#3	1,2	9,7	337,00

FL1064-4N	10'6"	#4	1,2	11,4	347,00
FL1104-4N	11'0"	#4	1,2	11,5	349,00

### 4. VENTUS SALT

Taper: **Moderate/Fast**

Action: **Fast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **FRS-N**

Sections: **4**

We created a series based on a wide range of graphite mats dedicated especially for fishing by the salt water. The blanks have strengthened upper section, which goes imperceptibly into relatively solid bottom part. Such construction improves rod loading during casting and enables easier work with heavier baits.

Constructions: **PAFB, MMT, SCT**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FRS9212-4N	9'2"	#12	1,7	13,2	409,00
FRS9313-4N	9'3"	#13	1,8	13,4	419,00

## 6. VENTUS DH

Taper: **Moderate/Fast**  
Action: **XFast**  
Material: **LR Carbon 58 msi Blend**  
Joint: **put over**  
Series: **FDH-N**  
Sections: **6**

Construction advanced blanks created from different graphite fiber mats. A series of fast blanks with a strengthened middle section, and a strong, progressive butt cap. Optimized when it comes to cooperation with the heads, which, combined with a huge stability, gives perfect casting possibilities.

Construction: **PAFB, MMT, SCT**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FDH1309-6N	13'0"	#8/9	1,9	13,4	572,00
FDH13610-6N	13'6"	#9/10	2,1	14,3	600,00

# CARP BLANKS

## 1. MARIN

Taper: **XFast**  
Action: **XFast**  
Material: **Carbon 58 msi Blend**  
Joint: **put over**  
Series: **CM-N**  
Sections: **2**

We used Nanomat 58 msi as the primary building component. And what a result! The obtained blanks can be characterized by high speed and definitely peak deflection. The relatively subtle tip smoothly turns into a strong bottom section. This strong, but yielding part can generate surprising power, simultaneously presenting noteworthy progressiveness. Hence safe and secure towing of even the largest specimens has never been easier. Obviously, one cannot forget about the excellent casting parameters typical of this series.

Blank	Length	Power (lb)	Top (mm)	Bottom (mm)	Price (EURO)
CM1027-2N	10'0"	2,75	2,3	13,8	300,00
CM1227-2N	12'0"	2,75	2,3	14,6	311,00
CM1030-2N	10'0"	3,0	2,3	14,0	305,00
CM1230-2N	12'0"	3,0	2,4	14,9	316,00
CM1235-2N	12'0"	3,5	2,5	15,4	322,00
CM1335-2N	13'0"	3,5	2,6	19,2	347,00

\*\*\*

**The above rates apply to the unpainted blanks. Painting requires an extra charge – 40 EUR for a standard paint or 45 EUR for a transparent paint. Available versions are provided on our website.**

**In case of painted blanks, joints remain unpainted.**

\*\*\*

**The presented offer includes only the standard products. If you are interested in non-standard blanks, rods or any individual solutions regarding our products or any form of future cooperation, please contact us.**
